Subject Index

Abuse, 435–447
Adaptive functioning, 545–556
Adolescents, 23–33, 105–115, 171–178, 257–267, 279–284, 339–345
Aggression, 493–502
AIDS, 367–379, 545–556, 583–587
Alcohol, 557–566
Anxiety, 117–121, 257–267, 269–278, 471–479
Asthma, 35–46, 69–77, 415–426, 471–479, 481–491
Attitudes, 137–145, 339–345

Behavior, 23–33, 427–433, 545–556
Behavioral intentions, 137–145
Biofeedback, 225–254
Bone marrow transplant, 331–337

Cancer, 59–68, 79–91, 105–115, 117–121, 151–159, 269–278, 449–460, 493–502

Cerebral vascular accident, 503–513
Child disability, 427–433
Child distress, 535–543
Chronic illness, 93–103, 147–149, 279–284, 323–329
Cocaine, 557–566
Cognitive functioning, 5–13, 185–190, 353–358, 515–520, 567–576, 583–587
Constipation, 225–254
Communication deficits, 301–308
Coping, 79–91, 535–543
Cystic fibrosis, 403–414

Depression, 257–267, 353–358, 435–447, 481–491
Developing countries, 427–433
Development, 185–190, 301–308, 347–351, 353–358, 515–520, 583–587
Diabetes, 23–33, 171–178, 257–267, 393–402, 515–520
Discipline, 435–447
Domestic violence, 435–447
Drug prevention, 557–566

Emotional adjustment, 393–402
Encopresis, 225–254, 255–256
Enuresis, 193–214, 215–218, 219–224
Epilepsy, 339–345
Ethnicity, 557–566

Family, 93–103, 161–169, 257–267, 323–329, 471–479, 481–491
Family therapy, 23–33
Family violence, 435–447
Fathers, 79–91

Gender, 125–135

Health beliefs, 557–566
Health status, 415–426
Hemophilia, 309–322, 545–556
Hispanic Americans, 415–426
HIV, 309–322, 347–351, 367–379, 545–556, 583–587

Identity formation, 105–115
Impact-on-Family Scale, 323–329
International, 363–366, 367–379, 381–391, 393–402, 427–433, 435–447
Intervention, 117–121, 179–183, 225–254, 269–278, 331–337, 535–543
IQ, 59–68

Language acquisition, 15–18
Literacy, 15–18
Low birth weight, 353–358

Methodology, 19–21, 323–329, 403–414
Mexican-Americans, 415–426
Mothers, 79–91, 323–329
Multimethod, 35–46

Neonates, 577–582
Neuropsychology, 59–68, 309–322, 347–351, 503–513

Obesity, 137–145
Orofacial clefts, 185–190
Otitis media, 5–13, 15–18, 19–21

Pain, 53–55, 117–121, 269–278, 301–308
Parental adjustment, 79–91, 331–337
Parent-physician partnership, 69–77
Peers, 125–135, 147–149, 257–267
Poverty, 427–433
Prenatal drug exposure, 583–587
Preterm infants, 353–358
Procedural distress, 269–278
Processing speed, 515–520
Protective factors, 471–479
Psychosocial adjustment, 93–103

Quality of life, 403–414, 415–426

Reading, 15–18
Recurrent abdominal pain, 125–135
Relatedness, 481–491
Risk behaviors, 367–379
Risk factors, 79–91

Siblings, 279–284
Sickle cell disease, 287–299, 503–513
Social ecology, 435–447
Social support, 257–267, 353–358
Stanford-Binet:IV, 179–183
Stereotype, 151–159
Stress, 79–91, 125–135, 331–337, 353–358, 427–433
Substance use, 493–502

Transplantation, 567–576
Treatment, 53–55, 215–218, 219–224, 255–256

Voiding cystourethrogram, 535–543
